312 signatures | 312 publications
1,463 unique HGNC symbols
identified from 1,241 records; screening flow in Figure 1
8 external cohorts
7 GEO microarrays (n = 1,289) + TCGA COADREAD RNA-seq (n = 358)
total 1,647 patients, 473 events
Uniform reconstruction and scoring
within-cohort z-standardisation | oriented C-index
uniform unweighted z-mean over measured genes; published
coefficients deliberately not carried into the evaluation
Arm A
Primary evaluation
312 × 8 = 2,496
external validations
C, AUC, calibration,
DCA
Arm B
Head-to-head comparison
vs de novo comparators:
size-matched random
null (B = 1,000) +
clinical model
Arm C
Attribution & bias
16 prespecified
methodological variables;
claimed vs recomputed
Arm D
Re-derivation
minimal-compliant
protocol; own
signature, same
judgement
