A 2,496 evaluations vs random gene sets
median +0.0107
59.7% positive
p = 3.7e-60
Number of evaluations
ΔC_random (signature C − matched random-gene-set median)
B Increment above routine clinical variables
median +0.0045
75.4% positive
p = 2.7e-211
Number of evaluations
ΔC_clinical (clinical + signature, minus clinical alone)
C Evaluation noise resolves into direction once averaged
% of evaluations / signatures positive
59.7%
77.6%
75.4%
98.7%
chance
random: record
random: signature
clinical: record
clinical: signature
